# TEAKWALL

## AN EYECATCHER IN YOUR INTERIOR!

Teakwall offers stylish, trendy handmade wall panels which fit in any interior and space. They are a real eyecatcher and create a cozy atmosphere.

Not one of the Teakwall panels are identical. Every little piece is unique and has its own history. They are made especially voor Teakwall and consist of recycled teak wood from old, traditional Javanese houses and fishing boats. So besides being characteristic the panels are also ecologically sound: no trees are cut down for the production of the panels.

Apart from the fact that the panels form a perfect and contemporary completion to any wall in various spaces, they also improve the acoustics there. Furthermore, the panels are available in various designs and sizes. They are maintenance-free, can be placed both horizontally and vertically and are easy to install. Get inspired by our presentation and explore the possibilities Teakwall can offer to improve your interior.
